

Microfibre Cleaning Guide

The Process

When using a Microfibre cleaning cloth system, it is essential to follow a colour-coded guide to correspond the colour of the cloth you are using with the area you are cleaning. For instance, assigning RED Microfibre cloths for toilets and urinals, GREEN cloths for fixtures such as taps, and BLUE cloths for general purpose cleaning outside the washroom ensures each cloth has a specific purpose/area.

The Benefit

The main benefit of using a microfibre cleaning system is to avoid cross contamination. Because each colour of cloth is assigned to a specific area of cleaning, it is easy to avoid cross contamination. In addition, this unique system is very simple, yet effective.
